

**Ecstasy - Responsive Multi-purpose HTML5 Template**

**Coral-Themes**

**December 5, 2014**

# ECSTASY

## DOCUMENTATION

Thank you for purchasing my template. If you have any questions that are beyond the scope of this help file, please feel free to contact this template's support forum. Thanks so much!

### **TABLE OF CONTENT**

1. Introduction
2. Website Structure
3. CSS Files and Structure
4. JavaScript Files
5. Sources and Credits

# 1. INTRODUCTION

Ecstasy is a simple yet modern multi-purpose HTML5 template which can fit your business, corporate or portfolio sites very well. It has been built with latest technologies and trends.

## **Generally Ecstasy has the following characteristics:**

- Valid HTML5 & CSS3
- Fully Responsive (Desktop, laptop, tablet, mobile)
- Browser compatibility
- Bootstrap 12-columns grid system
- FontAwesome Icons 4.2.0

## **The major sections/features that Ecstasy template provides are:**

- Parallax Backgrounds
- About Us
- Team Members
- Services
- Masonry Portfolio List
- Portfolio Project Expander
- Work Process
- Price Table
- Clients & Testimonial

- Content & image sliders (JCarousel and Owl Carousel)
- Ajax/PHP Contact Us Form (working)
- Fun Counters
- Skill bars
- Call to action bars
- Google Map Integration
- Blog List with/without Filter (**new**)
- Blog Single Post (**new**)
- Subscription Form (**new**)
- Single Project/Portfolio Details (**new**)
- One-page Layout (**new in V-1.4**)
- Smooth Scrolling (**new in V-1.4**)

## 2. WEBSITE STRUCTURE

All required files are organized within appropriate folders as below:

### - **main download folder**

- **css folder** - Contains the .css files

- **js folder** - Contains all jQuery plugins and the custom .js file

- **images folder** - The images used in the demo of the template isn't available in the download package as of copyright rules. So, you need to put your own images inside this folder.

- **fonts folder** - Contains the FontAwesome icon package

- **include folder** - Contains any PHP script used in the template. In our case, there's only one file called process.php which is used for the contact form process.

- **HTML files** - All the HTML files used you see in the demo.

### 3. CSS FILES & STRUCTURE

Ecstasy is designed based on Bootstrap 3 grid layout, which has max of 12 column. The columns are flexible and can be changed according to [Bootstrap documentation](#).

There's also a custom CSS file called `css/styles.css` which contains all the custom styles used to design the template. You can bring changes to this `styles.css` file, but any changes to the `bootstrap.css` file directly, is not recommended.

```
/* Table of Content
=====
| | | -- GENERAL --
| | |
| | | -- HEADER TITLE
| | | -- Super Slides
| | | -- LOGO
| | |
| | | -- MENU ITEMS
| | | -- SUBMENU ITEMS
| | | -- menu search form
| | |
| | | -- SERVICES --
| | | -- ABOUT US --
| | |
| | | -- call to action
| | | -- counters
| | | -- work process
| | | -- progress bar
| | |
| | | -- ISOTOPE
| | | -- LIGHTBOX
| | | -- JCAROUSEL
| | |
| | | -- PORTFOLIO --
| | | - grid-layout
| | | - hover-effect
| | | - expander
| | |
| | | -- TEAM MEMBERS --
| | |
| | | -- TESTIMONIAL --
| | | - client
| | |
| | | -- PRICE TABLE --
| | | -- CONTACTS --
| | | -- BLOG
| | | - single blog post
| | | - sidebar
| | |
| | | -- FOOTER --
```

The styles.css file has a table of content and you can easily find each section by searching the label written in the table of content. For example: If you are looking for SERVICES section, then you find the name from the following table of content. Each section is well indented so you could trace and find the style easily.

### 3.1 LOGO & NAVBAR

You can use either text and image logo types in your website.

The template comes with hidden and visible navbars. The default is hidden, but if you want to have it visible then you can use a class called .visible-navbar and attach it to the very first nav tag of every html page you use. For example:

```
<!-- LOGO SECTION -->
```

```
<nav class="navbar-fixed-top visible-navbar" role="navigation">
```

If you don't want to have a fixed navbar on the top then remove the class navbar-fixed-top from the nav tag above.

### 3.2 MENU

You can add menu items very easily with this template.

```

<!-- MENU START -->
<nav class="cbp-spmenu cbp-spmenu-vertical cbp-spmenu-right" id="cbp-spmenu-s2">
  <div class="container clearfix">
    <ul class="menu-item-links">
      <!-- MENU ITEM 1 -->
      <li class="dropdown">
        <a href="#">Home</a>
        <ul class="submenu-items transition">
          <li><a href="index.html">Home 1</a></li>
          <li><a href="index-alt.html">Home 2</a></li>
        </ul>
      </li>
      <!-- MENU ITEM 2 -->
      <li class="dropdown">
        <a href="#">Services</a>
        <ul class="submenu-items transition">
          <li class="selected"><a href="services.html">Services 1</a></li>
          <li><a href="services2.html">Services 2</a></li>
        </ul>
      </li>
      <!-- MENU ITEM 3 -->
      <li class="dropdown">
        <a href="#">About</a>
        <ul class="submenu-items transition">
          <li><a href="about.html">About Us</a></li>
          <li><a href="about2.html">About Us 2</a></li>
        </ul>
      </li>
    </ul>
  </div>
</nav>

```

Every drop down menu has a class called ‘dropdown’ and then every drop down menu has submenu items called ‘submenu-item’ class.

### 3.3 HOMEPAGE BANNERS

For the homepage, Ecstasy uses a background image or a slider. The solid background image is changed finding the #banner search keyword in the styles.css file:

```
#banner{
```

```
background: linear-gradient(
  rgba(0,0,0,0.5),
  rgba(0,0,0, 0.8)
), url(../images/portfolio-cover.jpg) 50% 0 no-repeat fixed;
height: 600px;
margin-bottom: 50px;
background-size: cover;
}
```

The slider that is used in this template is called SuperSlides. You can find its link in the credits part. Search for the `#slides` keyword in the `styles.css` file and bring your desired changes if you want to. Remember if you want to add a new slide then you need to change both the html file and the css file. for example:

```
.slides-pagination a:nth-child(3):hover:after,
.slides-pagination a.current:nth-child(3):after{
  content: "unique";
}
```

The above code is for the 3rd slide used in the template. so if you want to add the 4th slide, you need to add this block of code:

```
.slides-pagination a:nth-child(4):hover:after,
.slides-pagination a.current:nth-child(4):after{
  content: "flexible";
}
```

And in the html file, you need to add just another div like this:

```
<div>
    
    <div class="content-layer text-center">
        <h2> CODES.</h2>
    </div>
</div>
```

### 3.4 PAGE HEADERS

Each page has a banner header like this:

```
<!-- HEADER SECTION -->
<section id="aboutus" class="col-md-12 jumbotron header-title">
    <header class="container">
        <h2>
            <a href="index.html"><small>Home / About /</small></a>
            <span>About Us</span>
        </h2>
    </header>
</section>
```

So the id gives the section a unique identifier in the css file where you can change its background image by looking for the id ( in this case look for #aboutus in the styles.css). And the class header-title gives all the pages headers a common and consistent look for the breadcrumb and title of the page.

## 3.5 ICONS

I have used FontAwesome 4.2 for the icons used in the Services Section and also for the social icons. You can choose any icon from the 439 icon list. They are scalable vector icons that can easily be customized. You can change their color, size, dropshadow etc. the same way you customize a text.

```
<!-- menu social icons -->
<div class="social-icons menu-social-icons col-sm-12 text-center">
  <a href="#"><i class="fa fa-twitter fa-lg"></i></a>
  <a href="#"><i class="fa fa-github fa-lg"></i></a>
  <a href="#"><i class="fa fa-behance fa-lg"></i></a>
  <a href="#"><i class="fa fa-google-plus fa-lg"></i></a>
</div>
```

Here you have all the available icons by [FontAwesome](#). You can change the icon by simply writing its name for the i tag class. For example for facebook icon, you will replace fa-twitter with fa-facebook.

## 3.6 PHP CONTACT FORM

The contact form is fully complete and working. You just need to put your own email address in include/process.php file in order for the email to reach you. If you want to customize the contact form validation options, you can do so from custom.js.

```
$to = "youremail@domain.com";
```

### 3.7 GOOGLE MAP

Ecstasy uses a custom Google map by SnazzyMaps. You need to find your own latitude/longitude from Google maps and put them in here where it's bold:

```
var myLatLng = new google.maps.LatLng(43.642566, -79.387057);
```

Also if you want to edit the position of the marker, underneath the line about, you will find this code:

```
var markerPosition = new google.maps.LatLng(43.659066,  
-79.383057);
```

So, play with the numbers until you find your desired marker position.

### 3.8 TEMPLATE COLOR

This template comes with 7 unique and trendy colors. You can replace the default styles.css file with any of the ready-made css file of your choice. You can of course choose your own favourite color by just replacing the name main.

### 3.9 SMOOTH SCROLLING (UPDATE)

Smooth scrolling is implemented in V-1.4 in the One-page layout. It has been implemented while clicking on a menu item, then it scrolls smoothly to the appropriate location and also in the slider where you can click on a button of a slide and it will take you to the right place. So, for this functionality the custom.js has been effected. The following code has been added to the end of the custom.js:

```

468
469
470 /* SMOOTH SCROLLING */
471 $('[data-toggle="my-scrollspy"]').each(function() {
472     if($(this).attr('href').indexOf("#") == 0) {
473         $(this).click(function(e) {
474             e.preventDefault();
475             var scrollTop = $("html,body").scrollTop();
476             var targetOffset = $($($(this).attr('href')).offset().top-100);
477             $('body, html').animate({scrollTop: targetOffset}, 700);
478         });
479     });
480
481 // end of smooth scrolling
482 setTimeout(updateScrollSpy, 1000);
483
484 /* scroll spy */
485 function updateScrollSpy() {
486     jQuery('[data-spy="scroll"]').each(function () {
487         var $spy = jQuery(this).scrollspy('refresh')
488     });
489 }
490
491
492 })(jQuery); /* end of file */
493

```

You can adjust the offset height in the line 475; it's top-100. This means when you click a link and it scrolls to a target location, how much distance should be between the top of the page and the target section after scrolling. So can adjust this by changing the number 100.

Also, this line has been added to the MENU TOGGLING section, which hides the menu layer after a menu item is clicked:

```

menuRight.onclick = function() {
    classie.toggle( this, 'active' );
    classie.toggle( menuRight, 'cbp-spmenu-open' );
};

```

Now, whenever you want to smoothly scroll to a location, you need to do the following in the html file:

1. add the data-spy attribute to the body tag:  
`<body data-spy="scroll">`
2. Add an id to the element you want to scroll:  
`<section id="about-scroll" class="col-md-12 main-section-margins intro">`
3. Add the data-toggle attribute to the anchor which you want to click and also put a hash before the id in the href:  
`<a href="#about-scroll" data-toggle="my-scrollspy"  
class="btn">MEET THE TEAM</a>`

## 4. JAVASCRIPT FILES

Ecstasy uses the following jQuery plugins:

1. jquery-2.1.1.min.js
2. jquery-ui.min.js
3. bootstrap.min.js
4. jquery.jcarousel.min.js
5. owl.carousel.min.js
6. grid.js
7. modernizr-2.5.3.min.js
8. jquery.isotope.min.js
9. waypoints.min.js
10. imagesloaded.pkgd.min.js
11. classie.js
12. jquery.counterup.min.js
13. jquery.superslides.min.js
14. lightbox.min.js

And of course the custom.js file which contains custom functions and configurations for the following:

1. page loader
2. image and testimonial carousels
3. fun facts
4. menu toggle
5. jCarousel responsiveness

6. Isotope configuration
7. super slides
8. contact form validation
9. and styles for the custom Google map by SnazzyMaps

## 5. SOURCES & CREDITS

All the sources used in the template have been credited here:

## 5.1 IMAGES
